

This document serves as the comprehensive **Technical & UX Master Plan** for integrating the "**Election 2026**" vertical into *The Leaders* platform. It is designed to ensure a premium, error-free, and high-performance experience, with a specific focus on the interactive Nepal election map.

The Leaders – Election 2026 Integration: Technical & UX Master Plan

Version: 2.0

Scope: Full Stack Integration, UI/UX Standards, Interactive Map Module

Target Audience: Development & Design Team

1. Executive Overview

The goal is to launch "**The Leaders - Season 1: Election 2026**", a dedicated vertical for the March 2026 House of Representatives election in Nepal. This is not just a blog category; it is a distinct product experience featuring real-time data, interactive tools, and high-trust journalism.

Core Objectives:

- **Central Hub:** A "Grand Central Station" for all election content.
- **Interactive Data:** A vector-based, interactive map of Nepal's 77 districts.
- **Trust & Clarity:** Clear labels (News vs. Opinion), rigorous fact-checking, and "premium" reliability.

2. Technical Architecture

2.1 Tech Stack

We will leverage the existing robust stack to ensure performance and SEO dominance.

- **Framework:** **Next.js 14+ (App Router)**. Key for Server Components (RSC) to handle heavy data without client lag.
- **Language:** **TypeScript**. Strict mode enabled to ensure zero runtime errors.
- **Styling:** **Tailwind CSS + Shadcn/UI**. For consistent, accessible, and "premium" UI components.
- **Database:** **PostgreSQL** (via **Prisma ORM**). Essential for the relational data needed for the map (District <-> Candidate <-> Party).
- **State Management:** **TanStack Query** (React Query) for client-side map interactions; **Zustand** for global UI state (e.g., filtering modes).

2.2 High-Level App Structure

Using Next.js App Router for optimized routing:

Plaintext

app/

```

└── (site)/
|   └── election-2026/      # The Election Vertical Root
|   |   └── page.tsx       # The "Election Hub" (Map + Feed)
|   |   └── layout.tsx     # Unique layout (Gold accent theme)
|   |   └── map/           # Dedicated Map View (Full Screen)
|   |       └── [district-slug]/ # Dynamic District Detail Page
|   |           └── daily-brief/ # Daily Updates Feed
|   |           └── candidates/  # Candidate Directory
|   |           └── fact-checks/  # Fact-Check Wall

```

3. Feature Spotlight: Interactive Nepal Election Map

This is the flagship feature. It must be vector-based, scalable, and responsive.

3.1 Functional Requirements

- **Geography:** Accurate SVG rendering of all **77 Districts** of Nepal.
- **Interactivity:**
 - **Hover:** Highlights district borders in brand accent color (Gold); shows tooltip with District Name + Key Stat (e.g., "12 Candidates").
 - **Click:** Opens a "**District Drawer**" (Side Sheet) without leaving the page.
- **Data Loading:** The drawer dynamically fetches and displays:
 - List of Candidates (Photos, Names, Parties).
 - "Hot Issue" for that specific district.
 - Past Election Result (2022) for context.

3.2 Technical Implementation (Component Logic)

We will build a custom `<NepalMap />` component using D3.js logic within React, avoiding heavy 3rd-party mapping libraries (like Leaflet) to keep the site fast.

- **Source Data:** nepal-districts.topojson (Lightweight vector data).
- **Logic Flow:**
 1. User clicks "Kathmandu-1".
 2. onClick handler triggers a Server Action: `getDistrictData('kathmandu-1')`.
 3. Data is cached via React Query.
 4. Side Drawer slides in with the data.

4. Data Strategy & Schema

To make the map and profiles work, the data must be structured relationally.

4.1 Database Models (Prisma)

Code snippet

// Core location data for the Map

```
model District {  
  id      String  @id @default(cuid())  
  name    String  @unique // e.g., "Chitwan"  
  slug    String  @unique // e.g., "chitwan"  
  province Int  
  voters  Int?  
  candidates Candidate[]  
}
```

// The politicians

```
model Candidate {  
  id      String  @id @default(cuid())  
  name    String  
  partyId String  
  party   Party   @relation(fields: [partyId], references: [id])  
  districtId String  
  district District @relation(fields: [districtId], references: [id])  
  photoUrl String  
  status  String  // "Announced", "Withdrawn", "Elected"  
  promises Promise[]  
}
```

// Content Models

```
model FactCheck {
```

```

id      String  @id @default(cuid())
claim   String
verdict String  // "True", "Misleading", "False"
proof   String  // Markdown content
}

```

5. UI/UX Design Standards

5.1 Visual Identity: "Season 1"

The election section needs to feel like a "special event" while staying true to the brand.

- **Accent Color: Election Gold (#D4AF37).** Used for active states on the map, buttons, and "Winner" badges.
- **Secondary Color: Ballot Red (#E63946).** Used for "Urgent" briefs or "False" fact-check stamps.
- **Typography:**
 - *Headings:* Serif (e.g., Merriweather) for authoritative feel.
 - *Data/UI:* Sans-serif (e.g., Inter) for the map and tables.

5.2 Key Page Layouts

A.

The Election Hub (/election-2026)

- **Hero Section:** Split view.
 - *Left:* **The Daily Brief.** Top 3 bullet points of the day.
 - *Right:* **The Interactive Map** (Mini version).
- **The Grid:** Masonry layout of "Explainers" and "Profiles".
- **The Fact-Check Wall:** A horizontal scrolling ticker of recent claims and verdicts.

B.

Candidate Profile

- **Header:** Large photo, Party Logo, Name, and District.
- **Tabs:**
 1. **Bio & Track Record:** Past achievements and background.
 2. **2026 Promises:** Checklist of what they promise to do.
 3. **Voting History:** (If applicable) How they voted on key bills.

C.

The Daily Brief

- **Format:** "Axios-style" smart brevity.
- **Structure:** "The Big Idea", "Why it Matters", "Go Deeper".
- **Visual:** Clean text with bullet points, minimal distractions.

6. Reliability & Quality Assurance

To ensure the platform is "trustable and reliable":

1. **Static Stability (ISR):**
 - Candidate profiles are statically generated. If the database goes down, the pages *still work* for users. Revalidation occurs every 60 seconds.
2. **Map Error Handling:**
 - If the SVG fails to load (rare), the component automatically falls back to a **Searchable List** of districts.
3. **Fact-Check Rigor:**
 - All "Fact Check" content types must have a required verdict and sourceLink field in the CMS before publishing is allowed.

7. Implementation Phases (Sprint Plan Alignment)

- **Phase 1: Foundation (Days 1-5):**
 - Setup election-2026 routes.
 - Build the District and Candidate database models.
 - Deploy the "Election Hub" skeleton.
- **Phase 2: The Map & Core Data (Days 6-15):**
 - Implement InteractiveNepalMap component (SVG paths).
 - Connect map clicks to the "District Drawer".
 - Populate initial candidate data for major districts.
- **Phase 3: Content Engines (Days 16-25):**
 - Launch "Fact-Check Wall" and "Daily Brief" templates.
 - Implement filtering and search.
- **Phase 4: Polish & Peak (Days 26-33):**

- Load testing the map for high traffic.
- "Last Minute Guide" features.

```
// types/election.ts
```

```
export type Party = "Congress" | "UML" | "Maoist" | "RSP" | "Independent" | "Other";
```

```
export interface Candidate {  
  id: string;  
  name: string;  
  party: Party;  
  photoUrl: string;  
  status: "Confirmed" | "Withdrawn" | "Winner";  
  votes?: number; // Optional until election day  
}
```

```
export interface DistrictData {  
  id: string;  
  name: string;  
  slug: string; // e.g., 'kathmandu-1'  
  province: number;  
  voters: number;  
  candidates: Candidate[];  
  hotIssue: string; // The specific issue for this area  
}
```

```
